

# HEALTHCARE, LABS, AND MORE IN THE Inland Northwest

We are happy to announce our new PAE office in Spokane!

While the front door is still squeaky, our experience in the area tells a longer story of client support for mechanical, electrical, plumbing, lighting, and technology services: we've contributed designs to projects in healthcare, higher education, laboratories, and more. Our local partnerships with K-12 schools include districts like Creston, Garfield, Granger, and Palouse, and our mission critical data center experience in the region spans back over a decade.

We are excited to support the service our partners rely on with the care and convenience of a local contact in downtown Spokane.

601 W. Riverside Ave., Suite 285  
Spokane, WA 99201  
509-900-6025

## In Our Backyard

With a central location in the Inland Northwest, the team in Spokane and Coeur d'Alene lives, works, and plays here, bringing their families and engineering expertise to the community. We've contributed to over 100 projects in the last 10 years. Here are some of our favorites.

Global Animal Health Labs,  
Washington State University  
**PULLMAN, WA**

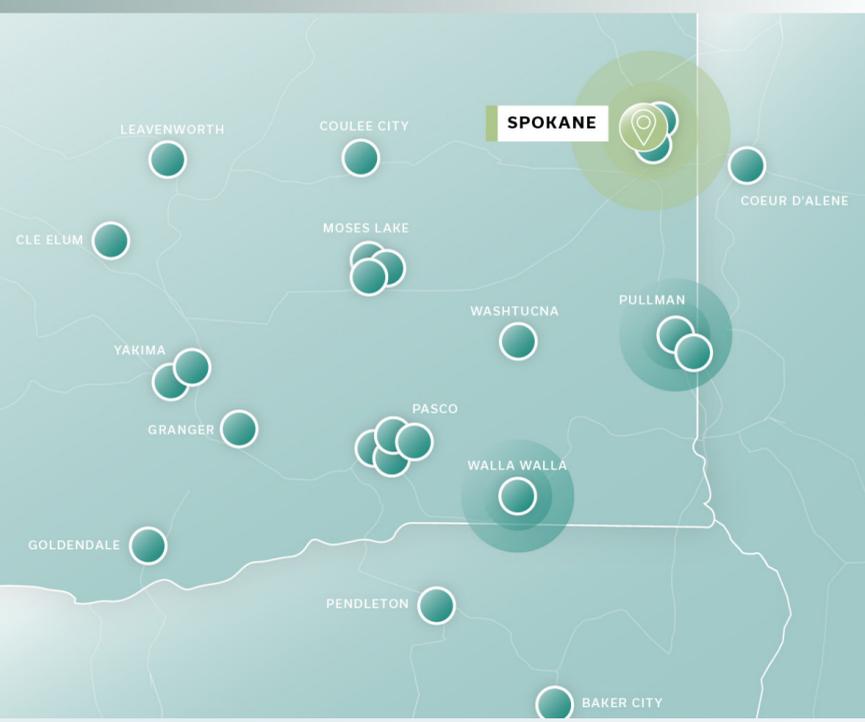

The new WSU laboratory helps serve the global community through the study of infectious disease. PAE contributed mechanical, electrical, plumbing, telecom, security, and sustainable design services that helped the project achieve a 42% reduction in energy relative to the LEED baseline.

The new hospital houses vital services like ICU and surgical beds, a labor and delivery unit, an emergency department, and more. PAE provided mechanical, electrical, plumbing, technology, and regenerative services that help with energy efficiency and patient comfort. The design is all-electric for heating and cooling.

Samaritan Health Moses Lake  
**MOSES LAKE, WA**

## With over 100 projects in Eastern Washington, Northeastern Oregon, and Idaho, we are at home from Spokane to Pendleton and beyond.

## The Spokane Team

### DAVE WILLIAMS | PRINCIPAL

Dave has over 20 years of experience in mechanical engineering. Through his extensive work with data centers, laboratories, and healthcare facilities, he has become exceptionally skilled at providing designs for controlled environments. Dave focuses on improving patient care, reducing operating and maintenance costs, and increasing energy efficiency. He has been working in the Eastern Washington region for over a decade, specifically on data centers, healthcare facilities, and K-12 energy upgrades.

### JON KROMBEIN | SENIOR ASSOCIATE, ELECTRICAL ENGINEER

After years of living in the bright lights of both Portland and Seattle, Jon and his family are happy to have settled into the quieter nature of Coeur d'Alene. His four kids are now tromping through the woods and lobbying for a family boat, while Jon plans weekends around hiking, mountain biking, and banjo-playing. As a Senior Associate at PAE, Jon has contributed electrical expertise to healthcare facility design for over nineteen years and is pleased to support and grow the team's presence in the region.

### CHARLIE ENQUIST | MECHANICAL ENGINEER

A WSU alum, Charlie is happy to be back in Spokane. He keeps busy shooting hoops in local basketball leagues and foraging for mushrooms with his dog Penelope. A talented mechanical engineer with expertise in energy modeling, HVAC, plumbing, and fire protection systems, Charlie contributed to Sea-Tac Airport's International Arrivals Facility and to healthcare design throughout Washington and the Inland Northwest. He looks forward to diving into even more projects in the region.

### ANDREW ENRIGHT | MECHANICAL ENGINEER

After attending Gonzaga University, Andrew spent a stint in Seattle before being wooed back by the wide open spaces of Spokane. Though he spends his free time rock climbing, snowshoeing, golfing, and paddleboarding with his wife and dog, Andrew's biggest passion is designing efficient mechanical systems. He contributed to WSU Global Animal Health, among others, and looks forward to becoming a part of the community.

### ABBIE BULLEN | MECHANICAL ENGINEER

Living in Coeur d'Alene offers Abbie a chance to be closer to family along with her favorite places for backpacking, hunting, fishing, camping, and skiing. A passionate mechanical engineer, Abbie has worked on Samaritan Healthcare Moses Lake, Grant County Morgue, and Garfield and Palouse School District upgrades in the Eastern Washington region. She is thrilled to be part of the team at the new Spokane office location.
